

# Anteo Group Astonishes Automated Clearing House Client

## INDUSTRY AND CLIENT PROFILE

Our client is a leading provider of credit card transaction processing and is an automated clearing house.

## PROJECT

The project involved the development of the client's test automation process. The project involved rewriting test automation scripts with a tool specifically designed for .NET web based applications.

## CHALLENGES

The client worked exclusively with three other contracting companies, but was not receiving quality candidates or customer service. Thus, Anteo Group was tasked with finding candidates with numerous

skill-sets in one shot.

## VALUE AND RESULTS

This was the first opportunity to work with the client, and Anteo Group exceeded the expectations of the client due to the extensive requirements definition and quality assurance.

- Anteo Group spent the time up-front with the client to determine all the skill-sets necessary for the position in addition to analyzing the client culture.
- Anteo Group performed phone and personal interviews, technical references and administered a customized test to all candidates prior to interviewing.

- Anteo Group submitted only one candidate for the position with supporting documentation and details on candidate location, costs, and availability.
