

# Anteo Group Amazes Financial Services Giant

## INDUSTRY AND CLIENT PROFILE

The client is leading provider of integrated personal financial products.

## PROJECT

The client engaged Anteo Group to provide project management to the IT Operation's team for system design, the build out of the core recordkeeping system and the build out of all the interfacing applications and their supporting Oracle and SQL databases.

This recordkeeping system represents the epicenter from which most mission-critical company interfaces have been developed. It provides core data to third party vendors and a database that produces

internal and external files and reports vital for trading, reconciling, billing and research purposes. Thus, this upgrade has an enormous ripple effect throughout the company's suite of applications and interfaces.

## CHALLENGES

The client worked exclusively with internal human resources and several contracting companies, but was not getting quality candidates or customer service. Thus, Anteo Group was tasked with finding candidates with numerous skill-sets.

## VALUE AND RESULTS

- Anteo Group spent the time up-front with the client to determine all the

skill-sets necessary for the position in addition to analyzing the client culture

- Anteo Group performed phone and personal interviews, technical references and administered a customized test to all candidates prior to interviewing.
- Anteo Group submitted only one candidate for the position who was then hired.
