

Anteo Group Consulting Solutions

CONSULTING SOLUTIONS

Anteo Group's Consulting Solutions begin with a diagnostic of the current state of your organization from an enterprise application perspective. The purpose is to provide you with an overview of your "As Is" environment, and to establish benchmarks against which your future "To Be" performance can be measured.

Using our proprietary methodology, we evaluate your organization on these key factors: people and organizational structure, business processes, and technical environment. You'll get a performance gap evaluation that compares best

practices with standard practices in the technical environment and identifies opportunities for improvement.

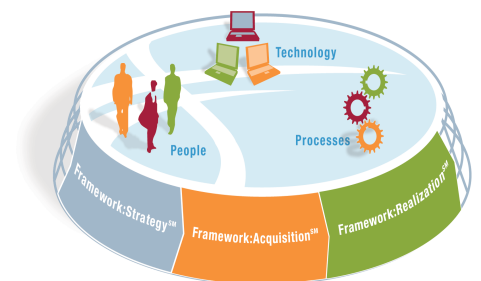

THE ANTEO GROUP DIFFERENCE

By breaking down the barriers of outmoded, inefficient ways of doing business, we help to align people, processes and technology in innovative ways so that your organization performs more efficiently and more productively.

We call this approach the Framework:SuiteSM. Built on industry best practices, it provides guidance with tried and true methods for achieving results

through three key phases:

- Framework:StrategySM
- Framework:AcquisitionSM
- Framework:RealizationSM

INDUSTRY EXPERIENCE

Anteo Group has helped a wide range of organizations succeed including several Government Agencies, Care USA, Arthritis Foundation, ADP, Accenture, Capital Cities Technologies, The Weather Channel and more. Following is a brief account of some of our recent success stories.

Industry: Education & Government

Project: Travel & Expense System

Challenge: The system was a custom application operating on an unsupported technology platform with limited documented processes.

Results: Anteo Group's consultants documented the current system and business processes, developed plans for disaster recovery, business continuity, systems upgrades and support as well as provided short- and long-term recommendations for improving operations.

Industry: Not-for-Profit

Project: Learning Management System (LMS) Fit-Gap Assessment

Challenge: The client faced many obstacles, such as Internet access, support, ownership, timing, and training.

Results: Based on analysis, Anteo Group showed that the existing system would meet business requirements. The investment needed was additional resources and training to support the expanded requirements of the production system.

Industry: Technology & Consulting

Project: PeopleSoft Financials Upgrade

Challenge: The client's main challenge was finding industry-specific Senior Functional and Technical PeopleSoft resources within a short time frame.

Results: Anteo Group provided resources with not only the specific project skill sets, but also an understanding of the client's complex business requirements. In addition to providing resources, Anteo Group delivered several fixed

scope strategy projects, was involved in project management and strategy, conducted and led fit gap sessions, and provided technical resources for the development and modification of reports.

Industry: Banking & Finance

Project: Enterprise Resource Planning (ERP) Implementations and Upgrades

Challenge: The challenge for the client was to find Senior Technical and Functional ERP consultants in a short amount of time for varying contract lengths.

Results: Anteo Group provided consultants experienced with the client's proprietary technologies as well as fully funded the efforts to train the consultants.
